DETAILED ACTION

Specification

1. The amendment filed on 29 April 2002 and on 30 June 2003 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: The changes made to Figures 1A, 2A and 3A (filed on 30 June 2003) constitute new matter (the addition of drive shaft 21, electric motor 27a and driving gear 25a). In the preliminary amendment of 29 April 2002, items 2-7 and 9-11 (i.e., amendments to the specification) contain references to one or more of drive shaft 21, electric motor 27a and driving gear 25a, which are not supported by the originally-filed specification and which constitute new matter. In the preliminary amendment of 29 April 2002, items 8-10 (i.e., amendments to the specification) contain the expression "rotated in opposite directions", which are not supported by the originally-filed specification and which constitute new matter.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear,

Art Unit: 1732

concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 11, 15, 32, 36, 53 and 57 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In each of these claims, the expression "contact points between the fibers and the spindles being not permanent" does not have support in the originally-filed specification and thus, constitutes new matter.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant

Art Unit: 1732

is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-16, 18, 19, 21-37, 39, 40, 42-58, 60, 61, 63 and 64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sordelli (U.S. Patent 2,302,508).

Sordelli (see the entire document, in particular, page 1, col. 2, line 29 to page 2, col. 2, line 72; Figures 1, 2 and 3) teaches a process of, and apparatus for, drawing fibers, including the steps of feeding, drawing and conveying (or taking off) and including a conveyor-drawing structure, feeding means, taking off means and driving means. Sordelli does not explicitly teach the aspect of the apparatus constructed to provide a ratio of fiber outlet speed (V_{outlet}) to a fiber speed in the drawing process ($(V_{\text{fiber}})_{\text{max}}$) greater than 1. However, such an aspect would have been obvious to one of ordinary skill in the art at the time the invention was made in view of Sordelli principally because the apparatus of Sordelli, like the instant apparatus, draws the fiber by expanding the circumference of fiber loops while conveying the fiber loops along conveyor-drawing members (note especially Figures 1, 2 and 3 of Sordelli).

Conclusion

7. The examiner notes that, in the preliminary amendment of 30 June 2003, under section "e" (Remarks/Arguments), applicant lists items 1-6 of purported amendments. However, these amendments (i.e., items 1-6) are not in the instant application and thus, these amendments have not been made.
